Description:

TML_RMS – Resource Management System

TML_RMS (TeleMobile Labs Resource Management System)
has been designed as a tool which makes it possible to book
and manage lab resources. This software makes it possible to
choose given devices being elements of a lab, to book the mentioned
devices for a specific period and to identify and configure tests.
After the needed elements (resources/devices) are selected,
TML_RMS checks their availability on a given date and time (accord-
ing to the reservation calendar). Next this software gives
its clients the possibility to define the test parametres
and procedures so as to have the testing environment assembled
and configured at the requested time and day.

Technical specifications:

Laboratories:	Set number and types of laboratories
Available hours:	Set available hours for reservation per laboratory
Users:	Set number and types of users
Reservation:	Set option "Add a new person to an existing reservation"
